

SENSE

SE **X** SE

X-sense is not just a rim, but a family of wheels. The new "6D" molding technology invented by ALCHESMIT enables the printing of pre-impregnated unidirectional carbon fiber with a complexity of shapes unique in the market, impossible to realize until today. A technology resulting from over two years of research at the plant in the province of Venice, where production takes place. A 100% "made in Italy" production.

0 A RANGE FOR ALL NEEDS

Not just a rim, but a full range to meet all needs, from cross country to the new enduro plus and fatbike specialties:

MODEL	WHEEL DIAMETER	INTERNAL CHANNEL	USE
X9.26	29"	26 mm	MARATHON
X9.33	29"	32 mm	ENDURO
X9.44	29"	44 mm	PLUS + ENDURO
X7.26	27,5"	26 mm	MARATHON
X7.33	27,5"	32 mm	ENDURO
X7.44	27,5"	44 mm	PLUS + ENDURO
X6.85	26"	85 mm	ADVENTURE

1

NO HOLES

A truly tubeless rim: its special profile, in fact, is designed for the insertion of the nipple from the outside, allowing the realization of a channel without the conventional holes for the nipples. Therefore, no more tape and the great advantage of being able to do maintenance to the wheel without having to completely remove the tire.

2

SHOCK ABSORBER

The special X profile with semi-chamber, unique in the world, allows the rim to flex in the center in case of violent impacts, thus allowing the profile to absorb the stress loads without exceeding the breaking point.

3

UN-LOCK 2.0

An innovative profile which encloses the advantages of the "tooth profile" and of the "un-lock" one, but without the down sides of them: a set of large dimensions like the traditional un-lock for a greater resistance to impacts than the traditional one, but with an inclination towards the interior of the rim which hold the tire, thus avoiding beads breaking or loss of pressure.
